IT Professional with positive energy and desire to explore and share growthwhilst fostering knowledge. Recognized as a self-motivated, creativeindividual who consistently maintained a balance between ongoinglearning development and relationship enrichment. I have a clear andlogical mind with a a practical approach to problem-solving and a drive tosee things through to completion. Seeking for more knowledge to gainthrough a work-related environment for the purpose of enhancing my skillsby developing technology.

WORK EXPERIENCE

Software Engineer (React Native)
Codelantic (Pvt) LTD

09/2021 - present

Codelantic is a software development company which provides financial technologies on banking eco systems and e-commerce eco systems into a large scale.

SpotonMoney

SpotonMoney is a FINTEC based mobile banking application which is designed and developed to transfer money across created beneficiaries across the globe. The platform consists of three main applications. A mobile app which is built with an event driven architecture using React Native cross platform for Android and IOS. A consumer web application using React sharing the same event driven architecture of the mobile app. An admin portal developed using React, for admin access and admin operations. The front-end applications are very tightly coupled with the data model architecture. Which is defined by DTO objects that creates a tree of data layers which renders screens and objects respectively. The DTOs coupled user interfaces give a fully dynamically and also helps in adopting changes in the platform flexible and customizable approach where user interfaces could be rendered.

Genxt Sri Lanka (PVT) Limited
- ERP Payroll system for Genxt Sri Lanka. It is a web portal designed and developed for employee back-office purposes. The task assigned was to develop a leave calculation module.

  - **Technologies used : ASP.Net, Entity-Framework, ADO.Net, Web Forms, and WEB API, LINQ query, EDMX, GitHub,WCF, WPF, CI/CD**

- *SriKantha Motors (PVT) Limited*

  This is a Web application that was developed for a budget management client in Sri Lanka. This application was developed using angular 6 for front-end and Spring boot for backend services. This application runs on an event driven architecture which is mostly controlled by events. The front end was designed to work with events received from the Kafka services. Net background hosted services are written to receive the events that are serialized through the spring boot application and these events contain data and those are saved to a MySQL database using .net repository classes. This application follows an event driven flow and all of the user behavior of the application is tested end to end using protractor tests.

  - **Technologies Used: React.js, Node.js, Redux, Firebase, Azure Devops, Digital ocean, Mongodb, CI/CD**

Intern Software Engineer
Koombiyo IT

01/2019 - 12/2019,   *Sri Jayewardenepura Kotte*
